What do you think about this item? Rating: 4 out of 5 posted on26.12.2015, 07:18 A1 Although I am not very familiar with the operating system, this software does work to some extent. I have used this software to create reports of optical drives in a Windows Server environment and, although it might not be the easiest way of doing so, it does have its uses in the workplace. The controls in the software are very simple and, although there are some outstanding functions, there is nothing out of the ordinary. You can use this to record information about optical drives in a network environment. This software has its drawbacks, but it does work. What do you think about this item?
